LEGACY MODE

Though we've been testing the sync many times, still this would be a good idea, as all other tech giants do, that after going live with the new system, we should allow old users to switch back to the previous version. Just in case of any trouble with the new system. This can be a temporary feature for a month or so. So we can deal with any post-launch issues without compromising on end users' time and money. We can put a BETA badge on the main header of the new site and show a clean notice bar on the my-account page, if the student is an old one, encouraging old users to keep using the new interface while also allowing them to switch back to the old interface. The Old (legacy) interface could be accessed by something like legacy.onlinetexasitc.com.

We'll need to program a little interface script that'll maintain both login sessions at once. So that if a user logs in on the new system, s/he will get a seamless auto login when switching to the previous interface.

This will be only for older users who have already courses in progress at the time of go-live and want to continue on the old interface.

All providers and new students won't be able to switch back to the old interface.

This sounds good. Progress through a class would then also be the same across the new website and the legacy site?

And here's what the Legacy mode bar alert looks like:
