Website Backend (Super admin) **

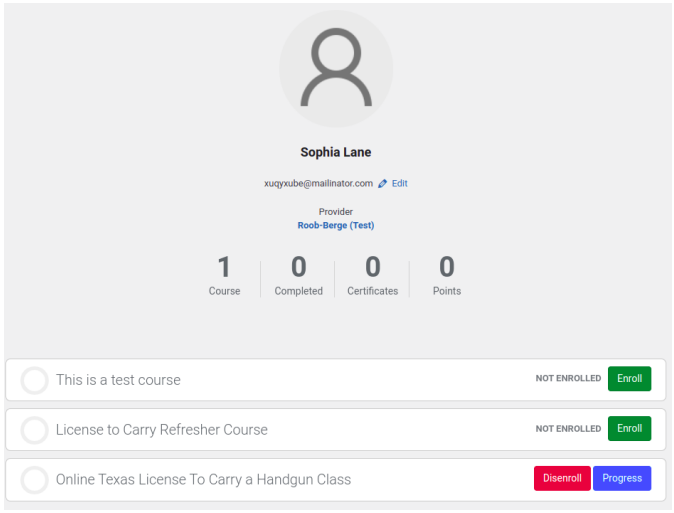

1. Ability to view and edit all user information

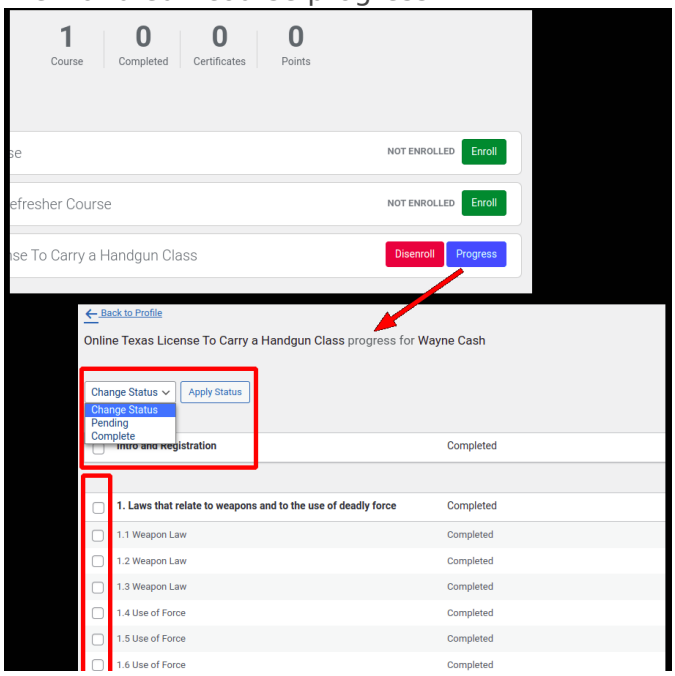

2. Including certificates of completion of LTC class

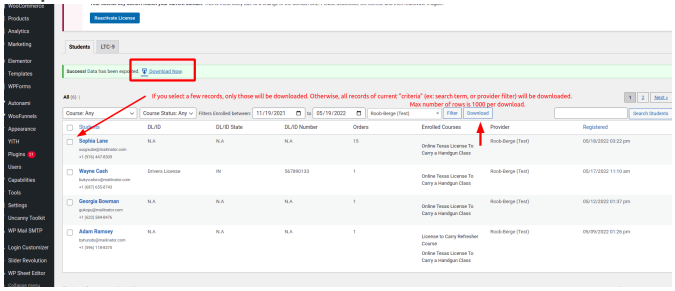

3. Enroll or de-enroll students from the online classes

4. View and edit course progress

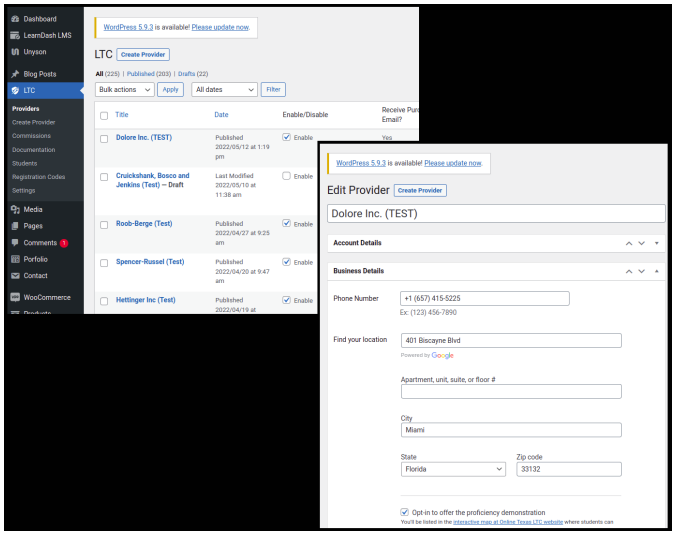

5. Export all student information to excel

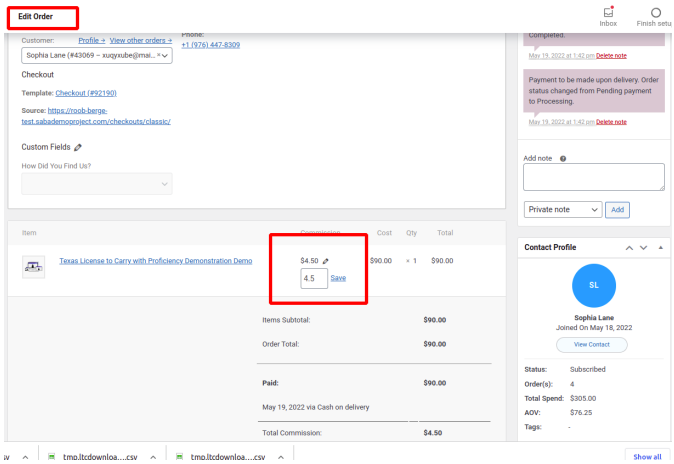

6. Include every student in export
   >>> See above.

7. View and edit business data and information including (order) commissions

8. View and edit orders/purchases
   >>> That's just Woo's default order page for super admin.

9. Edit orders and commissions after orders have been completed

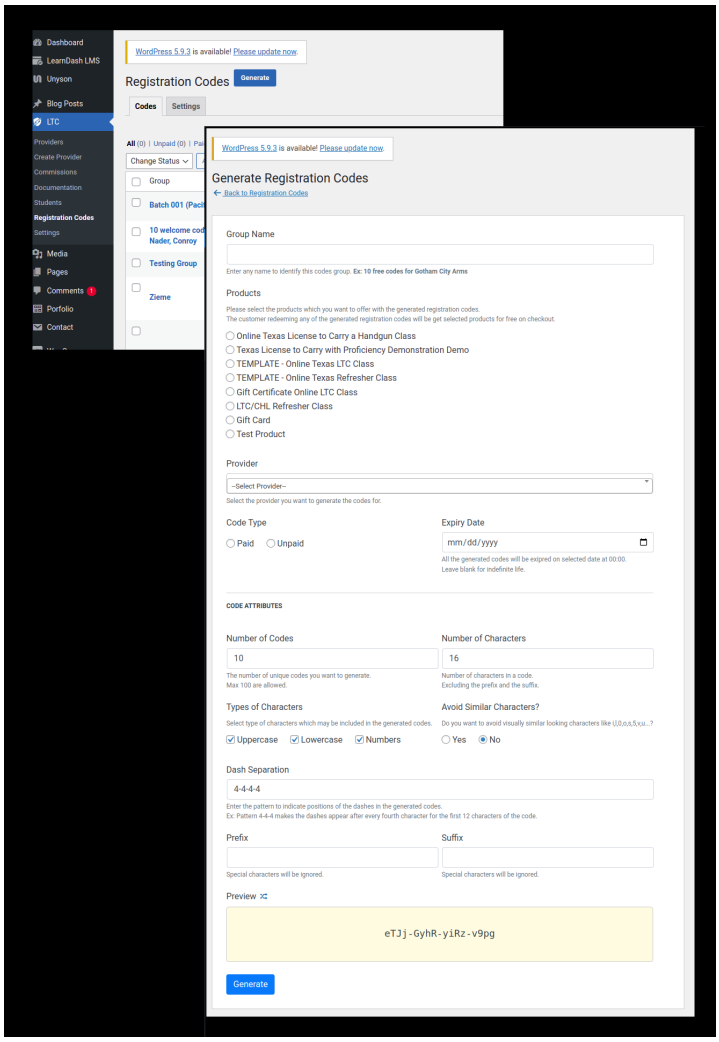

10. Change which product was ordered and Process commissions based on the change of the product
    >>> ** Feature not working

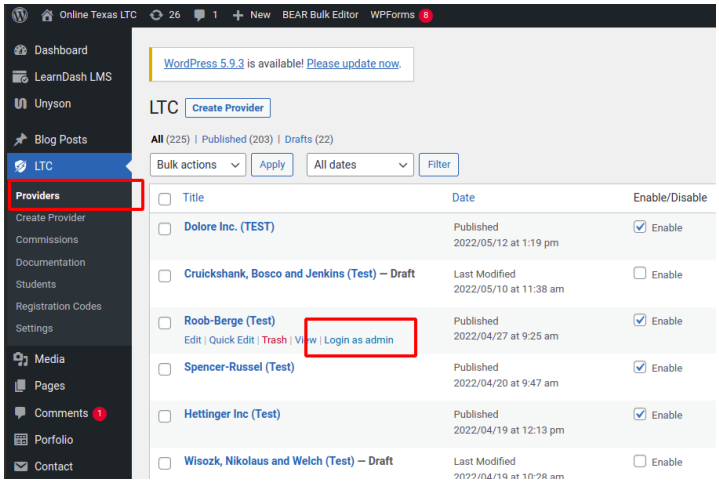

11. Hide/encrypt bank information for businesses
12. Ability to assign a customer to a different business
    (Doing this would allow that business to view that customers class information)

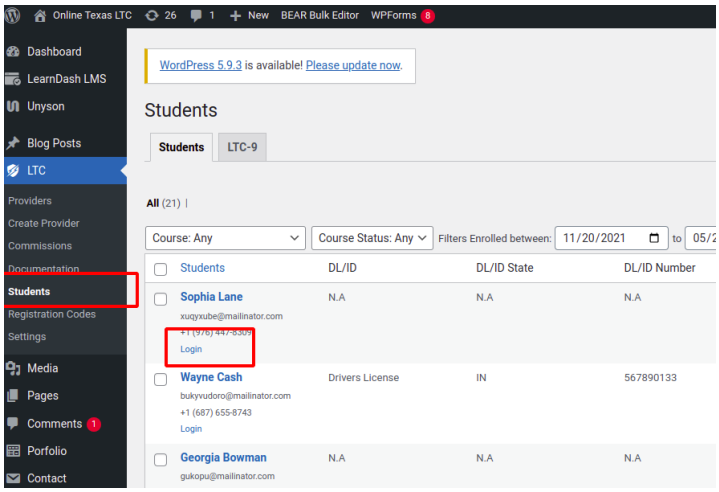

13. Automatic website backups to Microsoft OneDrive
    >>> Instead of Microsoft OneDrive, we use Acronis Off-premises backup service which secures all files and databases, we'll activate it when we buy a new server for the new system at the time of go-live.

14. Manually create registration codes for businesses

15. User Switching: administrators need the ability to switch between (login as) user accounts (provider admin and a student) for troubleshooting/testing purposes.
    View the site exactly how that particular user would
    This is possible in the current site with the Uncanny Toolkit plugin and works very well
